## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaufman et al (US005478260A ).

Kaufman's device discloses a card connector unit comprising a housing having accommodating space into which a card (70) provided with a group of external connection terminals (for making contact with the housing) is inserted from the side of an inlet, a first and second terminals section at 36 fixed to the housing and arranged in the accommodating space with positional discrepancy (see fig. 2) mutually connected and integrally made with metal sheets with soldering portion at 40 or 64 for soldering into an external circuit, wherein a first accommodating position differing a second accommodating position differing in an extent of insertion of the card into the accommodating space are set, wherein the first and second accommodating positions differing in the extent insertion of the card into the accommodating space (see figs. 1-10) are set, wherein the group of external connection terminals (see figs. 1-10) are in contact with the first terminal section when the card is placed in the first accommodating

position, and wherein the group of external connection terminals are in contact with the second terminal section (see figs. 1-10) when the card is inserting in placed in the second accommodating section; the first and second terminal sections (see fig. 5) with equal number pieces arranged along widthwise direction. However, Kaufman's device fails to explicitly disclose the terminal sections being arranged in a depthwise direction. It would have been obvious to one having ordinary skill in the art at the time the invention was made to arrange the terminal sections in a depthwise direction, since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japike, 86 USPQ 70.

### **Conclusion**

#### ***Allowable Subject Matter***

1. Claims 4-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Prior fails to the extent of the external protrusion the with different card lengths and the engaging pin with the shifting features with the rest of the claims limitations.
